

Heavy Duty Lifter for the Data Center Market

Innovation Designed Around You

**PHS
WEST
INC.**

“What I love about PHS West is the culture of connection and family that spreads outside of our company walls. We are motivated to foster relationships rather than sales with our customers.”

-Mattie Berg, *Customer Support Representative*

Safe Material Handling Solutions

Save time and money as you upgrade to accommodate increased production.

Heavy Duty Lifter

Our lifters are the lightest lifter on the market with the smallest available footprint. With a lowest possible lifting height of 3.5” and no additional pieces necessary, our lifter outperforms the competition.

Never worry about charging speed with our removable and replaceable battery packs. Downtime is virtually eliminated. The lifter comes standard with a remote control pendant to offer the most user-friendly up and down movements available today.

Our lifter has an optional telescoping capability as well! When paired with the fact that they are the easiest to maneuver, the answer is clear; the PHS West, Inc. Our lifter is the answer to create a safer and more lean data center operation.

Why Lifters?

- Lightest overall weight of any other on the market.
- High-load lifts lead to early wear-and-tear symptoms in the muscles, joints and discs.
- Lifting from and to low heights causes great strain on the back and knees.
- Lifting from and to high heights causes great strain on the shoulders and neck.

Heavy Duty Lifter

Features

- Anodized Aluminum/Steel (Stainless Steel) Construction
- Modular Design
- Large Caster Wheels
- Central Brake System
- Detachable Remote Control Pendant
- Multiple Lift Speeds
- Completely Enclosed, Single Lift-Mast with Electric Lift Screw
- Adjustable Load Capacity
- Detachable Power Pack for Off-Board Charging

Heavy Duty Lifter

Benefits

- Light weight and mobile for easy operation in narrow spaces.
- Easy movement with full load in all directions with casters.
- Foot operated, central brake on rear wheels – accessible from all sides.
- Precise stop of lift function with use of slow speed feature.
- Single Column mast provides the operator a clear view for safe operation.
- Adjustable handlebar allows each individual to obtain a preferred work position, thus making it “ergonomically correct”.
