

DATA CENTER

Ergo-Express® Motorized Service Cart & Lifter

Reduce the risk of an injury associated with data center maintenance tasks.

Our Mission

PHS West is a relationship focused organization providing innovative products for a safe and efficient workplace.

Each day I spend at PHS West, Inc., I have the opportunity to generate and foster an environment rooted in creativity and productivity. Developing innovative solutions that make a difference for our customers is our top priority.

Isaac Braun
SENIOR MECHANICAL ENGINEER

Data Center Service Cart & Lifter

Our Data Center Lifter and Ergo-Express® Motorized Service Cart is designed with the unique needs of data center operations teams in mind. This all-in-one system allows a single operator to safely transport everything needed to perform routine server maintenance safely and efficiently. The Service Cart provides an efficient means of moving from location to location while the Lifter mitigates potential back injuries when installing or removing server equipment.

TECHNICAL SUPPORT

All PHS West products are backed by our 24/7 technical support guarantee meaning you can call us anytime for product support. With a three-year warranty on parts, optional extended warranty, and service package options, you can tailor your level of product support to meet your needs.

Data Center Service Cart & Lifter

FEATURES AND BENEFITS

The Service Cart and Lifter offer unique benefits both individually and when used in tandem.

ERGO-EXPRESS MOTORIZED SERVICE CART

The Service Cart can be configured to accommodate the specific equipment and tools used by your maintenance staff. Customize shelving and enclosure options as well as accessory storage, such as a laptop arm, to ensure your cart is the perfect solution.

DATA CENTER LIFTER

The low friction platform makes loading and unloading equipment effortless. The platform has a minimum height able to reach even the lowest point of a server rack and is easily controlled via a handheld pendant.

SERVICE CART AND LIFTER COMBINATION

The combination of Service Cart and Lifter allows a single operator to transport, install, and uninstall server hardware in a single trip. This reduces the time needed to complete server repairs, boosting the efficiency of routine server maintenance. Furthermore, the system mitigates the risk of overexertion injuries to team members from manually transporting equipment and tools, reducing burnout and staff turnover.

Once an operator has reached a job, the lifter can be separated from the cart and positioned for optimal access and minimal floorspace impact.
